

TECHNICAL TEST

Web and API Automation

As part of the recruitment of a Web & API Automation Tester who will work with the quality assurance and product to evaluate new and existing features and automate tests to identify and help remove bugs, glitches and other user experience issues a technical test is conducted.

Please develop test cases for the following two case studies.

1. Web Automation: <https://www.cheapflights.com.au/>
 - a. Develop tests for validation the logo and login button is displayed
 - b. Develop tests for searching flights
 - c. Develop assertions for flight search results
2. API Automation: <https://restful-booker.herokuapp.com/apidoc/index.html#api-Booking>
 - a. Develop tests for **CreateBooking** API endpoint with assertions for the response fields
 - b. Develop tests for **UpdateBooking** API endpoint with assertions for the response fields
 - c. Develop tests for **GetBooking** API endpoint with assertions for the response fields
 - d. Develop tests for **DeleteBooking** API endpoint with assertions for the response fields

MUST HAVES

- Positive tests
- Negative tests
- API response field assertions
- Location/ position of web element assertions

Bonus points if used following technologies Or you can use the JavaScript/ TypeScript test automation framework you are familiar with:

- WebdriverIO
- Node.js/ JavaScript
- Mocha
- Chai
